

Schain Wizard

Introduction

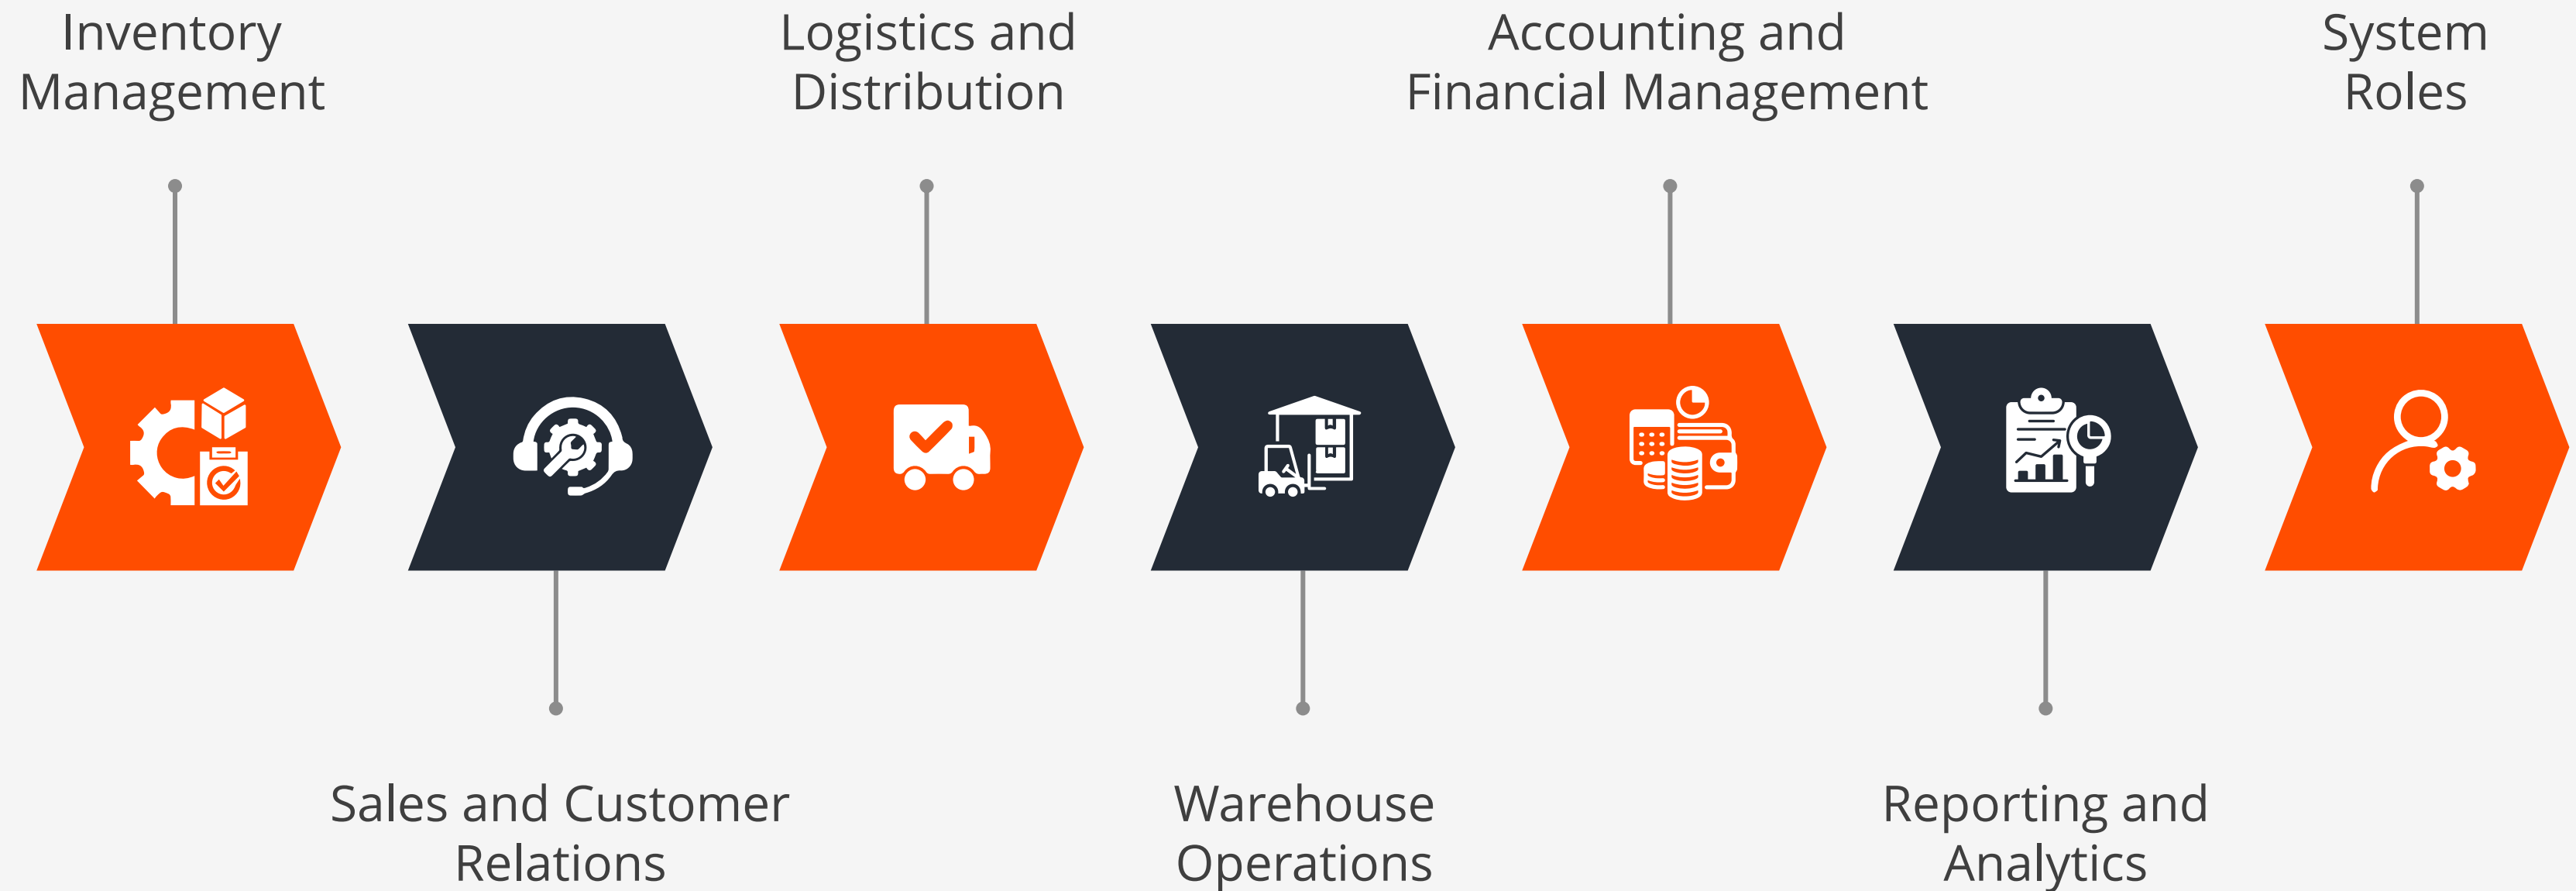

We are a software development company with nearly **18 years** of industry experience, specializing in creating innovative solutions. With 8 years of experience in supply chain projects, we focus on optimizing logistics and inventory management to enhance overall operational efficiency for businesses.

Product Overview

The Supply Chain ERP is a cloud application designed to help businesses manage their supply chain operations efficiently. It provides a centralized platform for:

Objectives

The objectives of our Supply Chain ERP are to enhance production efficiency, streamline inventory management, and ensure consistent product quality throughout the supply chain. By integrating real-time tracking and automation, the system optimizes sales, order processing, and ensures timely deliveries. It aims to reduce operational costs and improve resource utilization through better oversight of materials and production schedules. This unified platform strengthens overall control, empowering businesses to operate more efficiently and remain competitive in the market.

Key Features of the System

Features	Description
 Product Management	Manage detailed product information, including descriptions, prices, and categories. Track stock levels across multiple warehouses to ensure accurate inventory control.
 Inventory Management	Automate the management of all inventory within the system, ensuring real-time updates for stock levels. Monitor inventory flow and automate replenishment processes.
 CRM	Manage relationships with customers and suppliers, tracking interactions, orders, and communications. Facilitate personalized service and efficient contact management.
 Order	Streamline order processing by automating order creation, tracking, and fulfillment. Ensure timely and accurate deliveries with real-time order status updates.
 PO	Automate the creation, approval, and tracking of purchase orders (POs) from suppliers. Improve procurement efficiency by ensuring accurate and timely order placements.
 Accounting	Integrate financial workflows, including billing, invoicing, and payment tracking. Provide real-time financial reports for better financial management and oversight.

Key Features of the System

 Report	Generate comprehensive reports on various business aspects, such as sales, inventory, and financials. Allow users to make informed, data-driven decisions with ease.
 Statistics Dashboard	Provide a centralized dashboard with key performance metrics and statistics across the supply chain. Offer real-time insights into production, sales, and inventory data.
 Transfer Documents	Allows users with multiple warehouses to track inventory transfers between locations. Creates transfer documents to ensure accurate inventory movement and seamless warehouse coordination.
 Configuration	Enable system configuration options to customize workflows, user permissions, and notifications. Adapt the system to meet the specific needs of the business.
 WordPress Site	Allows seamless integration between the WordPress site and the supply chain ERP system. Automatically synchronizes product listings, customer data, and orders between the WordPress site and the ERP, ensuring consistent data flow and efficient management of eCommerce operations within the ERP.

Continuous Development

Our dedicated customer support and development team ensures the continuous enhancement of our Supply Chain ERP.

- Incorporating user feedback
- Enhancing security
- Providing regular upgrades
- Making continuous improvements based on stakeholder input
- Updating the stack
- Optimizing speed
- Offering client-specific customizations
